

Taber International, LLC provides consulting and system development services to commercial and government clients with fully customized smart automation, optimization, and process control solutions. Our mission is to enable clients to achieve their maximum potential through holistic system enhancements and applied data intelligence.

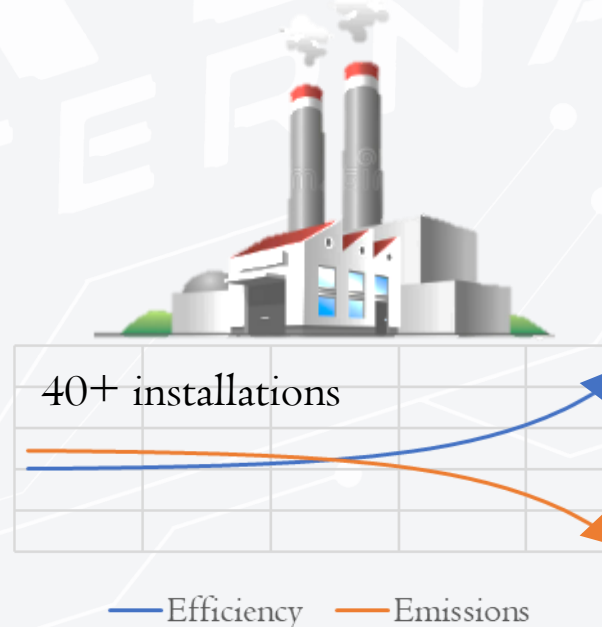

## Proven Approach

Although many processes appear similar on the surface, in Taber's experience each has its own unique characteristics and nuances. Even those that are seemingly "identical" in design and function often exhibit very different behaviors and responses. **Taber's approach is to customize the deployment of its wide range of technologies to meet the needs of each individual process.** Based upon the merits of the system itself, Taber will meld artificial intelligence, traditional feedback/feedforward control, fuzzy logic, first-principles modeling, expert knowledge, and multi-objective optimization to achieve the local and global objectives for a process and the site as a whole.
